

FERROVIT

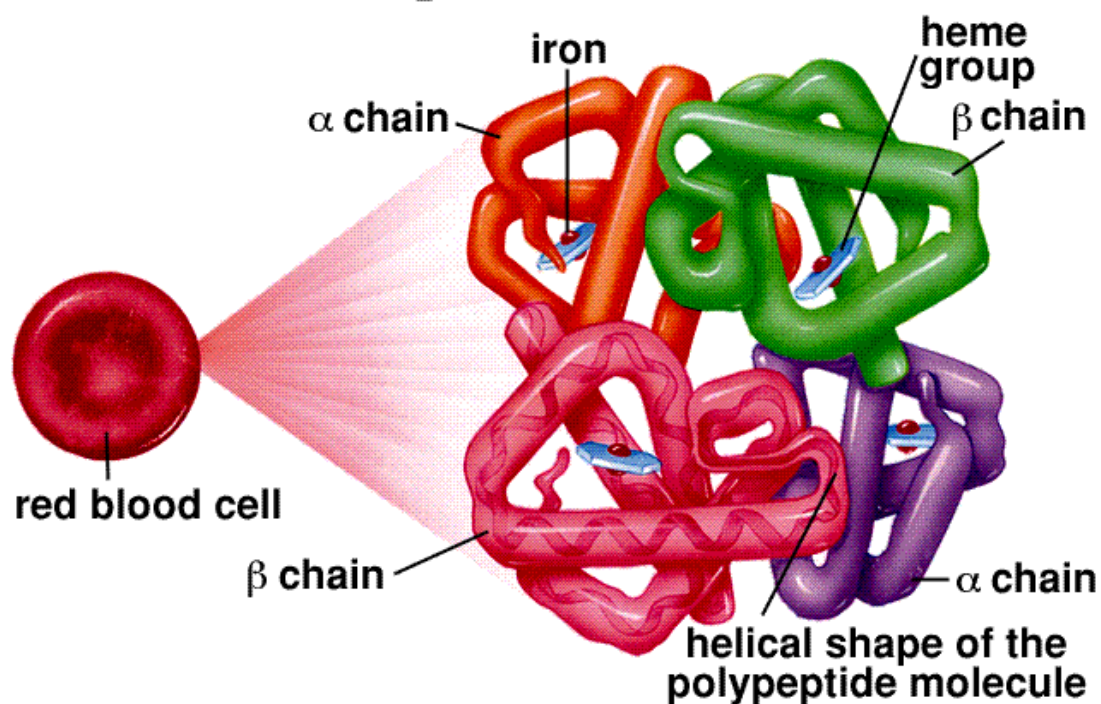

Ultimate Blend of Iron & Vitamins

Iron is a mineral that is required to perform important functions like carrying oxygen in the haemoglobin of red blood cells throughout the body to produce energy. Iron is also necessary for certain enzymes in the body to function normally.

When a dog is deficient in iron, it can lead to anemia, which is a lower than normal number of red blood cells and can tend to become lethargic, weak, and more prone to disease and illnesses.

Why Iron is important?

Hemoglobin Molecule

Iron is the most prevalent trace element in the body comprising about 0.005% of total weight. Its primary role is to serve as a component of haemoglobin and myoglobin which are the key for the transport and movement of oxygen around the body. It also functions in a number of enzymes such as the cytochromes, which are key regulators in energy metabolism.

FERROVIT is a combination of Iron, Vitamins with other effective amino acids & minerals formulated to augment the red blood cell production and to boost the immunity level in anemic conditions and also supports to prevent such conditions .
