

GLOWMINO+

Vital Syrup for Growing Animals

Protein is an essential nutrient and serves numerous functions in the body, such as muscle growth, tissue repair, and enzymes, transporting oxygen in the blood, immune functions and as a source of energy. Proteins are made of amino acids. Each protein has a unique combination of amino acids that contributes to its shape and function.

When a dog is deficient in iron, it can lead to anemia, which is a lower than normal number of red blood cells and can tend to become lethargic, weak, and more prone to disease and illnesses.

Essential Amino Acids for Dogs & Cats

High quality proteins have a good balance of all the essential amino acids

*Dogs cannot survive without protein in the diet
Dietary protein has 10 essential amino acids*

They provide building blocks for many biologically active compounds. They donate C-chains needed to make glucose to energy
